Tables: Student(sid, sname, ccode, dob, address)

Course(ccode, cname,did, fees)

Department(did, dname, location)

Faculty(fid, fname, sal, designation, doj, did)

Problem Statement:

Q13) Write a query to add 4 faculty members into the Faculty table with their ID, name, salary, designation, date of joining, and department ID.

```
mysql> insert into faculty values
-> (101,"meera",40000,"jl","2016-09-08",201),
-> (102,"suresh",23000,"sl","2015-09-21",202),
-> (103,"priya",45000,"jl","2019-10-18",201),
-> (104,"heena",75000,"hod","2014-06-08",203);
```

Q14) Write a query to remove the faculty member who joined recently.

```
mysql> delete from faculty where doj=(select max_doj from(select max(doj) as max_doj from faculty) as derived);
```

Q15) Write a query to display all faculty members who have joined before 2022.

```
mysql> select * from faculty where doj<"2022-01-01";
```

Q16) Write a query to display the names of faculty members and their department names (using a join between Faculty and Department).

```
mysql> select f.fname,d.dname from faculty f left join department d on f.did=d.did;
```

Q17) Write a query to display the faculty member(s) with the highest salary in each department.

```
mysql> select dname,max(sal) from faculty f inner join departemts d on d.did=f.did group by f.did;
```

Q18) Write a query to increment the salary by 12 % of their salary who is joined before 01-jan-2000.

```
mysql> update faculty set sal=sal*1.12 where doj<"2000-01-01";
```
